# TARANAKIPINE DECKING

## BPIR DECLARATION

All Taranakipine products are not subject to warning or ban under section 26 of the Building Act 2004.

### SCOPE OF USE

Taranakipine's Premium Decking is intended for outdoor small to large decks but can be used for walkways landscaping and everything in-between that requires a quality timber look. Is easy to work with, lightweight and can be enhanced by staining or painting. With regular cleaning and maintenance your pine deck will be around for years to come.

### CONDITIONS OF USE

Radiata Pine is a softwood and will naturally expand and contract with moisture. As our pine decking is not kiln dried, you must take extra care to ensure that your decking is not too wet when being installed. Of course, in winter this is not always possible, but taking precautions can help with reducing any issues with expansion and contraction of the wood, down the track. To get the best performance from your Taranakipine deck, please follow our recommendations on installation and maintenance.

### SUPPORTING DOCUMENTATION

The following additional documentation supports the above statements:  
Warranties and Product Technical Statements (Certification, Installation, Maintenance, Warranty)
