PRODUCT INFORMATION

LĒGNA engineered lining boards are manufactured, in New Zealand, with sustainably managed wood supply. The boards are selected to a premium grade before being laminated together. The vertical grain face of the boards give them a beautiful appearance and provides superior stability compared to standard wood lining boards. Boards are straight and long, ideal for projects with a requirement for less joins.

AVAILABLE PROFILES

LĒGNA comes stock ready in our Nickel Gap Lining profile, which is smooth on one face and bandsawn on the other, allowing the lining to be reversed to suit the environment. LĒGNA lining boards can be custom run to almost any lining profile.

AVAILABLE SIZES

LĒGNA can be custom run into almost any lining profile and lengths up to 5.4 metres.

PROFILE	SIZE mm	LENGTH metre
NICKEL GAP	137 x 17	4.8 / 5.4
CUSTOM	*POA	Up to 5.4

BEFORE INSTALLING

Note: This timber is a natural product and will move with change in environmental circumstances. Therefore we recommend this is allowed for when installing this product by;

1. Always keep the boards out of the weather in a dry location with good airflow. Do not allow the boards to get wet.
2. Store the boards in the room it will be installed into for 3-5 days prior to installation. For best results, place spacer boards between each layer to allow for air to flow between the boards.
3. If the boards are to be stained or painted, we recommend the first coats is applied before installing the boards.
4. Allow for a 3mm gap between all edges and other surfaces e.g. walls and ceilings, to allow for movement over time.
